(b) a second leg having first and second ends, said first end of said second leg being connected to said second end of said first leg so that said first leg is oriented at an angle with respect to ~~the~~ said ~~first~~ second leg; and

(c) a hook connected to said second end of said ~~extending leg~~ second leg, said hook being adapted to be releasably attached to the object and, when said first leg is disposed on said ~~support~~ upper surface, said hook lies beneath said ~~first leg and said first end~~ lower surface, so that the weight of the object exerts a force on said first end of said first leg toward said ~~support~~ upper surface and said second leg extends away from said lower surface to rotate the object about said first end of said first leg so that said second leg and said hook are free of said lower surface.

2. (Currently Amended) The device as claimed in claim 1, wherein there is further included a high coefficient material attached to and extending along the length of said first leg, to thereby engage a length of said upper surface of the support thereby tending to prevent ~~preventing~~ the movement of said first leg and said support surface with respect to each other.

3. (Original) The device as claimed in claim 2, wherein said material comprises a sleeve that is disposed about said first leg.

4. (Original) The device as claimed in claim 1, wherein said hook comprises a third leg having first and second ends, said first end of said third leg being connected to said second end of said second leg, and a fourth leg having first and second ends, said first end of said fourth leg being connected to said second end of said third leg.

5. (Original) The device as claimed in claim 4, wherein said third leg is disposed at an angle with respect to said fourth leg to permit the object to be readily disposed with respect to said hook.

6. (Currently Amended) The device as claimed in claim 1, wherein the object may take the form of a pocketbook, a handbag, a brief, or a shopping bag ~~or the like~~.
